Science Program

The Science program runs in accordance the National Curriculum Guidelines. Science is taught to all students from Prep - Seven by a Specialist Science Teacher. The school implements the Primary Connections Science Program. Our Science program is based upon theoretical knowledge and reflective practices. All students participate in investigations throughout each unit, assisting their understanding and allowing students to build and create their own knowledge. The science program also focuses on scientific literacies thus giving students the necessary skills and interest to help tackle Science in later years.

At Holy Name, Prep to Year 2 receives 1 hour of specialist Science Teaching per week and Years Three - Seven receive 1 and 1/2 hours a week. This ensures consistency across the school and allows knowledge and literacies to be extended and developed further, every year and across terms. Across the year all students participate in the four strands of science, being Biological Sciences, Physical Sciences, Chemical Sciences and Earth Sciences.

Science takes place in the dedicated science room. This room has been well resourced and equipped with all the necessary equipment needed for the successful delivery of our Science Curriculum.
